

# WORKING WITH US

## Custom solution

The customer relationship is at the center of our activity, we pay attention to all your needs. Since we created our R&D department back in 2013, we can carry out specialized studies for our customers. Tell us what your needs are and our team will custom build a solution.

## Help farmer

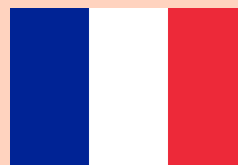

Our DNA comes from the company's founder, Mr. LEGER, who started making mechanics to help his local farmer friends. We continue this philosophy by making tools that ease agricultural labour, and save time and money.

## Environment-friendly

The issue of the environment and climate change are the main challenges facing the agricultural sector and concern the future of all. LEGER SAS has chosen to be an actor of this change and has developed an eco-responsible approach by working on machines that are increasingly energy and resource efficient.

# ABOUT US

Located in France, in the region of the famous Agen prune, LEGER SAS (Ltd) is an agricultural machinism company.

Founded in 1981, LEGER SAS was first established as a general mechanical workshop, then specialised in the agricultural sector with the manufacture of harvesting equipment such as trailers, pruning platforms, hazelnut and stone fruit harvesters.

Furthermore, LEGER SAS owns a R&D department, allowing us to enter new markets. We now manufacture equipments specialized in agriculture, viticulture and the food industry.

## GPS PLANTER A BETTER PLOT MANAGEMENT

Agricultural equipment  
General mechanics  
Metalworking

# PRECISION

Automate the planting of your vines, fruit trees and more with the GPS Planter. Equipped with a GPS antenna, the planter allows you to plant at regular intervals with precision and to optimise the yield of your vineyard or orchard as much as possible.

Depending on the local regulation, the tractor can be **self-steering** so only 2 operators are needed, for loading stakes and placing plants. The driver can devote himself entirely to the work required. The planter is capable of digging and closing furrows, inserting stakes and watering the plants. In a single pass the entire row is ready.

# BENEFITS

- ⚙️ Maximizes the yield
- ⚙️ Planting quality
- ⚙️ Plot management
- ⚙️ Makes tillage easier
- ⚙️ Low manpower
- ⚙️ Autosteering

# ADAPTABILITY

GPS Planter for :

- Vines
- Fruit tree
- Macadamia tree
- Ornamental plant
- any size of stake

Delivered with :

- Watertank
- Roof
- Slope correction
- Pressing wheel
- Hydraulic unit

Weight	<b>1100 kg</b>
Oil flow rate	<b>60L/min</b>
Operating speed	<b>1,5 - 2km/h</b>
Positioning system	<b>Trimble®</b>
Accuracy	<b>1 inch/ 2.55cm</b>
